Case Rate Analyzer®

patent pending

CRA® – CASE RATE ANALYZER®

With the government and consumer push for price transparency, patients will utilize transparent prices to shop for services. Therefore, it's imperative for hospitals to get their full packaged prices (not just line-item prices) in line with market competitors.

In addition to understanding an individual hospital's case rate components, Case Rate Analyzer® includes hospital-to-hospital and hospital-to-benchmark comparisons. Finally, Case Rate Analyzer® includes HPS's proprietary Resource Intensity Consumption Scores (RICS®) to adjust for acuity differences among hospitals' case rates.

Case Rate Analyzer® provides in-depth benchmarking of claim level prices for packaged services (e.g., insertion of pacemaker), including the line-item prices for the accompanying ancillary services that are typically associated with the primary service. Understanding frequently associated services that accompany a primary service is important for compiling a pre-service itemized statement (PSIS®).

HOSPITAL PRICING SPECIALISTS

Why Case Rate Analyzer®?

Benchmark service packages to identify differences in delivery of care

Compare prices at the encounter level and by line-item components

Analyze acuity levels across providers for the same service packages through HPS's proprietary Resource Intensity Consumptions Scores (RICS®)

Create a pre-service itemized statement to assist in developing a good faith estimate for self-pay patients
